

**SOLID SURFACE FABRICATION**

**STONE RELEASE FORM**

Granite is a product of nature. As with all natural materials, no two slabs are exactly the same. Granite countertops will have variations in color, mineral deposits, texture, veining and directional trends. These characteristics add to the beauty of the stone and will make your tops unique from any other. Samples viewed are intended to serve as general examples, not exact replicas of the product you will receive. To insure satisfaction, customers may view slabs at either our shop or at the stone importer, prior to the start of fabrication. We recommend this, as some materials have greater variance in textures than others. All granite countertops are sealed prior to installation to make them stain resistant; however, granite is not stain proof. Proper care and precautions need to be followed to reduce possibility of staining.

Granite countertops generally require field seams. All seams that may be required are at the sole discretion of the manufacturer.

Marble is softer and more porous than granite and requires extra maintenance. This also applies to non-traditional finishes on granite (i.e. honed, flamed, etc.)

**Waiver for Personal Stone Inspection:**

I understand the characteristics of this material and waive my opportunity to personally inspect the product prior to fabrication. I authorize McGrory Inc. to use stock material for my project and will not hold the dealer, builder or McGrory Inc. liable for variances in the material as outlined above.

**Personal Inspection of Stone:**

I have viewed my stone slabs and have found them to be acceptable with respect to the above items.
